

WHAT IS CLAIMED IS

1. A protection film for a base sheet of a lens sheet, wherein the lens sheet has its lens surface formed of a UV-curable resin layer;

the protection film has provided on its one-surface side an adhesive agent layer; and

a transmittance of ultraviolet rays of which wave length is 320 nm transmitting through the protection film is 82% or more.

2. A protection film for a base sheet according to claim 1, wherein an adhesive strength is from 0. 4 to 2. 3N / 25 mm.

3. A protection film for a base sheet according to claim 1, wherein, in case the protection film for the base sheet has been pasted, from the side of the adhesive agent layer, onto a surface of the base sheet having coated thereon an antistatic agent containing a cationic surface active agent, a surface resistivity after a lapse of one year of the base sheet is maintained at a value of $10^{12} \Omega / \square$ or less.

4. A protection film for a base sheet according to claim 1, wherein

the adhesive agent is the one that contains a polyolefin-based resin component.

5. A protection film for a base sheet according to claim 1, wherein

the material of the base sheet is an acrylic resin.
